

Academy Learning Center

Your Destination for Learning

What is the Academy Learning Center?

Ntrepid's Academy Learning Center (ALC) was developed to provide users with uninterrupted access to expert learning courses. Quickly onboard your new users; stay up to date with new product features as they are released; and learn tips, techniques, and best practices to reduce the human-side of operational risks. Enjoy a clean learning experience and direct access through any web browser.

About the Curriculum

Academy's curriculum pairs our suite of managed attribution (MA) solutions with in-house domain expertise to teach students the technical skills and operational best practices necessary for becoming effective cyber administrators. All students begin their journey with a required MA learning plan that introduces the foundational concepts of protecting your digital fingerprint and behavioral footprint. With this fundamental knowledge, students can successfully complete other assigned product learning courses, bearing in mind the ever-present risks of operating online.

Our goals for you are to:

- Leverage our SaaS solutions to effectively manage online attribution across the surface, deep, and dark web to support your mission operations.
- Understand the risks of identifiable digital fingerprints, techniques for open-source online investigations, and best practices for deep and dark web research.
- Master audit logging, compliance, and reporting features of Ntrepid tools in administrator and supervisor roles.

User Experience

Your Account Manager will provide you with an invitation to register users for the ALC. After that, users will receive a welcome email with log in instructions. Courses are assigned based your users' learning needs and will evolve with your mission.

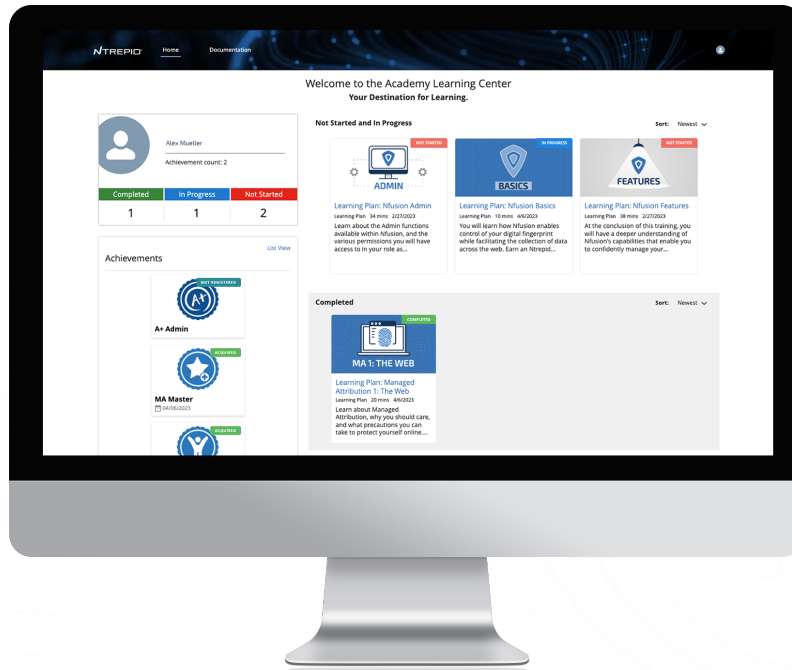

Academy Learning Center

What's Inside

Ntrepid's ALC is packed full of mission-pertinent learning. Here is a small sampling of the types of courses we offer our users:

- Product training
- Admin training
- Case studies
- Operational best practices
- Tips and techniques
- Emerging cyber trends

Academy Learning Center Features

Learning Plans

The ALC's learning catalog is built to be dynamic. As the sophistication of online adversaries evolves, so does your mission. Academy's catalog will keep the pace with industry trends, constantly offering insights into securely navigating a demanding online environment. As new features are released throughout the year, your users will be the first to learn how to leverage the advanced capabilities.

Quizzes

Have confidence that your users are retaining the learning material contained in ALC courses. Students will test their knowledge throughout their journey. These short quizzes track what users have retained and, upon request, these metrics can be supplied to administrators.

Access to Product Documentation

The ALC is more than just an online learning hub. Users can also access Ntrepid's technical product documentation to serve as a continuous learning resource. Both user and admin guides are available, based on ALC user permissions, along with cyber-expert research reports.

Analytic Solutions

Academy identifies, assesses, and interprets emerging cyber trends and challenges, creating actionable research reports to help our customers overcome these challenges. Spotlight reports analyze emerging online and technical platforms, while our Nsight Series examines real-world use cases to identify lessons learned or best practices.

Achievement Badges and Certificates of Completion

As users complete ALC courses, achievement badges will be awarded and saved in the users' profiles. This added gamification, provides users with a more engaging and rewarding learning experience.

Users can also earn a certificate of completion for successfully completing each learning plan. These certificates are available for download and printing.
