About Ntrepid

Advancing the Performance and Efficiency of the National Security Community Through Mission-Driven Technology

Ntrepid is the leading provider of cutting-edge managed attribution products for the national security community to discreetly and safely conduct sophisticated online operations in the most demanding environments. We leverage our deep-rooted experience in specialized and advanced missions to anticipate our customers' needs and provide solutions before the requirements are expressed. Our heavy investment in R&D allows for continuous evolution of managed attribution technology ahead of expanding mission requirements. Ntrepid's innovative product suite of secure, isolated operational environments fundamentally advances mission performance while providing comprehensive identity management and efficient workflows.

Core Competencies

Technology

- Secure managed attribution environment enabling integration with third-party OSINT tools including i2 Analyst Notebook, Maltego, and custom scripts
- Network routing management
- Business intelligence analytics, auditing, and oversight including full screen recording of user activity
- Forensic hashing of all data to ensure digital chain of custody
- Built-in situational awareness to provide operational safeguards
- Multiple authentic web browsers including Chrome, Firefox, and Tor
- Offers both persistent and non-persistent digital fingerprint
- Persistent data storage enabling search and annotation of collected information
- Secure file transfer and malware scanning between virtual and local networks
- Flexible device integration
- Approval workflow management

Innovation

- Investment in R&D is far higher than the industry average to perpetually advance our technologies and address the next set of customer requirements over the horizon

Discreet Procurement

- Trusted acquisition model of global rotating and dedicated persistent points of presence
- Custom-prepared procurement plan that ensures USG client operations are digitally and financially secure

Mission Support

- Dedicated account managers provide hands-on on-site solutions architecture auditing, consultation, and implementation
- Account mission guidance and dedicated corporate liaison
- 24/7 SOC and NOC support model staffed by cleared personnel
- Cyber solutions technical and operational training with the Ntrepid Academy
- Continual provision of TTPs in online operations

Our Company

Past Performance

For over 10 years Ntrepid has partnered with the national security community and fortune 500 companies to safely manage their online presence while collecting data critical to their online missions.
